

## Dev Log #5: Week of October 18th

---

### General description:

For the meeting this week we decided it would be best for everyone to demonstrate what we have completed so far. We also determined that it would be best if we had a working prototype by the next meeting, so we could test our app before presenting it in front of the class.

### What was completed?

We demonstrated our work to the group. I was not able to get the multiple chat rooms working but was able to show that our chat interface is able to communicate from my phone to the firebase database. I began my work on the structure of the rest calls for the server.

### Comments:

This week allowed us to see the progress of the team and determine where we need to be in a few weeks since our second deliverable was approaching soon.

### Goals for next week:

- Finish the structure of the rest calls
- Test if the new rest calls in the server are working through volley
- Continue working on the chat functionality of the app
