

## Dev Log #4: Week of October 11th

---

### General description:

The general direction of this week was mainly to continue on development that chat interface and rest-call structure

### What was completed?

I was able to find a usable to find a useable chat interface for our app online and implement it with our app

### Comments:

The issue with the chat interface that was implemented is it only created one chat instance. Meaning all users connected will only be in 1 chat room but our app needs to be able to run multiple chat rooms at the same time. As I continued working on the chat interface I fell behind on my work for creating a structure for the rest calls.

### Goals for next week:

- Find a way to create multiple chat rooms in firebase and interface
- Get volley working with rest calls in the server
- Develop a structure for the rest call in the front end for the server
- Get a working version of my code to demo to the other members
