

Dev Log #6: Week of October 25th

General description:

As previously stated, the goal for this week was to merge our code together and hopefully get a working version of our app. So that we could test it and make sure it would be working for our second deliverable. As we got together we began to realize many of us were behind on work and that if we didn't get to it we wouldn't have a working app for the second deliverable

What was completed?

We were unable to get a functional version of our code due to various backend and front-end issues. The structure of the rest calls was not completed and there was no progression in the chat function of the app

Comments:

The previous week was full of midterms for all members of the group. Many of us had put this project on the back burner during this week to free up time for our other courses. Which caused us to fall behind

Goals for next week:

- Get the ui to communicate and display information into the app
- Get a stable version of our code complete to be able to show during our presentation next week
- Finish the documentation for the d3
